Save up to \$15
on your new FlexCare.

To receive your Philips Sonicare rebate:

1. Purchase the products below from your dental professional's office or retail stores on or before 12/31/08:
 - ☐ Save \$10 on a Sonicare FlexCare, Elite, or Essence*
 - ☐ Save \$5 on Sonicare ProResults or e-Series brush heads (2 single-packs or 1 multi-pack)
2. Enclose:
 - this rebate form
 - the original sales receipt (please circle the Sonicare purchase price)
 - proof of purchase—cut out and attach the bar code from the bottom of the package
3. Mail to: Sonicare Rebate, PO Box 29367
Shawnee Mission, KS 66201-5367

PHILIPS
sense and simplicity

The new Philips Sonicare FlexCare

The new FlexCare, the most effective toothbrush in the Philips Sonicare family, delivers improved plaque removal and advanced features.

Powered by our patented sonic technology, Sonicare cleans beyond the bristles to remove plaque deep between the teeth and along the gumline. Sonicare gives you naturally whiter teeth and healthier gums. Guaranteed.

Significantly improved oral health, guaranteed

- FlexCare removes significantly more plaque than Oral-B Triumph and Sonicare Elite¹
- FlexCare is clinically proven to help reduce gingivitis²
- FlexCare is proven gentle on teeth, gums, as well as restorations, implants, and braces³

ProResults brush head for better tooth coverage

The new FlexCare ProResults brush head conforms to your teeth to remove more plaque with:

- Contour-fit bristles
- A wider bristle range for a broader sweeping motion

Cleans beyond the bristles
Plus, ProResults brush heads are easy to use and maintain.

FlexCare features can help improve your brushing habits

Modes and routines adapt to your brushing needs:

- Clean for everyday superior brushing
- Sensitive or Massage to meet your varying oral care needs
- MaxCare for a thorough full-mouth cleaning and massage
- GoCare for a quick clean between regular brushing

New brush head sanitizer

FlexCare also has a convenient UV sanitizer that kills up to 99% of bacteria* on your brush head. The sanitizer is built-in to the charger base in select FlexCare models.

Advanced features designed around you

NEW ProResults brush head
New brush head design delivers a broader sweeping motion for better plaque removal.

Two brush head sizes
Standard is ideal for complete cleaning. Compact provides precision cleaning.

NEW Multiple needs, one solution
3 Flexible brushing modes
2 Personalized cleaning routines

Quadpacer
30-second timer encourages even cleaning throughout your mouth.

Deluxe recharge gauge
Green light indicates battery charge and yellow light signals when to recharge.

NEW Multi-voltage compact travel charger
New compact charger lets you enjoy FlexCare while you're on the go.

Sonic Technology

Sonicare's technology is designed to deliver superior results.

Sonicare toothbrushes, inspired by the sonic technology used in dental offices, have dynamic cleaning action to reduce plaque along the gumline.

The bristles on a Sonicare play an important part too. Their high velocity movement creates the dynamic cleaning action, and allows for direct contact with each tooth. Sonicare's bristles are also designed to be extra gentle on teeth and gums.

The first time you use a Sonicare, you'll notice that the cleaning technique feels entirely different than any other toothbrush. Now you'll know it's because it cleans in a way that is completely unique from any other toothbrush.

+ Watch a brush head in action

A Brief History of Sonic Technology

Sonicare toothbrushes were brought to market by Optiva Corporation in the late 80s. Royal Philips acquired Optiva in 2000 as part of the product division Domestic Appliances and Personal Care. Since its inception Sonicare has grown from a small entrepreneurial venture capital company to become a global manufacturer of a successful consumer and dental professional proposition in electronic toothbrushes which is now the power toothbrush brand most recommended by dental professionals.

For further information please contact Terry Fassburg of Philips Electronics.

Benefits

Positive Impact on Overall Health

You will be hearing about it more and more: your oral health is linked to your overall health.

Often, issues with your oral health can be an indicator of—or even more importantly—directly effect your overall health. For instance, certain medical conditions require particular attention to oral care. For instance, some conditions, such as diabetes, require that you pay special attention to your teeth and gums in order to better maintain your health.

+ Read about the oral health/overall health connection

Healthier Gums

When plaque accumulates between the teeth and gums, it becomes an irritant to the gum tissues causing gingivitis, the most common form of gum disease. Sonicare is clinically proven to reduce gingivitis.

Sonicare also helps to shrink periodontal pockets, which form between the teeth and the gums when gingivitis goes untreated. Periodontal pockets are especially problematic because plaque and debris from food collect in the pocket, which can eventually result in the loss of teeth.

+ View the proven results

Superior Plaque Removal

Sonicare's dynamic action cleans teeth resulting in superior plaque removal making it a step forward in anyone's oral care.

+ View the proven results

An Investment in Your Oral Health

Giving your mouth the attention and care it deserves can really pay off. While it doesn't mean you should say goodbye to the

Sonicare FlexCare

Sonicare's top model offers personal care settings along with an improved brush head design.

+ Learn more about Sonicare FlexCare

dentist's office forever, using a Sonicare can help remove plaque and prevent in the development of gingivitis.

+ Read what makes Sonicare worth the cost

Gentle Brushing

Although it removes hidden plaque from hard-to-reach areas, the Sonicare toothbrushes' technology is gentle on teeth and gums requiring a lot less pressure from the user. But more importantly, research has shown increased compliance in users with the Sonicare toothbrushes.

+ Learn how sonic technology works

Healthier & Naturally Whiter Teeth

People notice the Sonicare difference in more ways than one. Right away your teeth are cleaner, leading to improved oral health. We are so confident that you will see and feel improvement that Sonicare is backed by a 90-Day Satisfaction Guarantee, or your money back.

Why Dispense Sonicare?

Sonicare uses superior technology

Sonicare toothbrushes use a technology that generates high amplitude and high frequency bristle motion, which in turn creates dynamic cleaning activity. The resonating motion of the bristles is gentle on dentin, yet penetrates deeply into interproximal spaces.

+ [More about Sonicare technology](#)

Philips Sonicare is backed by more than 140 abstracts representing clinical and laboratory studies at over 40 universities and research institutions worldwide.

+ [More about Sonicare's proven results](#)

Sonicare can improve patient compliance

Patient compliance can be improved by the visible results that Sonicare delivers in only 28 days. For many, seeing whiter teeth is a great motivator for patients to stay on the path to long-term oral care improvements. And as you know, there is new data showing that better oral health can have an impact on overall health.

Superior Technology

Philips believes in inventing technologies and designing products around the people that use them. Therefore, Sonicare is always improving the products they make. That's why the sonic technology that moves the Sonicare bristles is proven to deliver results that the patient can feel and that you can see.

Sonicare is based on a technology that is extremely advanced.

Here are the basics on how it works:

- Sonicare achieves its bristle velocity through a combination of high frequency and high amplitude bristle motion.
- This velocity generates dynamic action.
- Dynamic action is gentler on dentin than a manual or an oscillating toothbrush. This action cannot be achieved by oscillating, spinning, rotating, or pulsating brushes.
- The cleaning power of dynamic action, coupled with the specially designed bristle orientation, results in deep penetration of interproximal spaces.
- This process results in a distinctly different brushing experience.

Effect of the Sonicare FlexCare power toothbrush on fluoride delivery through Streptococcus mutans biofilms

Objective

Evaluate the ability of two power toothbrushes, the Sonicare FlexCare and the Oral-B Triumph, to enhance the diffusion of fluoride through a biofilm by fluid dynamic action in vitro

Methodology

Fluoride diffusion was established by an experimental system that measured the rate of fluoride diffusion through a membrane colonized with a Streptococcus mutans biofilm. In a fluid-filled container, the biofilm colonized membrane was contained in a water tight partition that separated the "brushing" chamber from the "measurement" chamber. Brushes were positioned perpendicular to the biofilm at 10 mm distance, then fluoride (1100 ppm NaF) was added to the brushing chamber and the brush activated to enhance fluoride penetration to the measurement chamber through fluid dynamic activity. Penetration of fluoride through the biofilm and membrane was measured with a fluoride electrode over a 4 minute period, and expressed as the "mass transfer coefficient".

Results

The mass transfer coefficient (a measure of the rate of delivery of fluoride through the biofilm-colonized membrane) of fluoride generated by powered brushing was significantly greater ($p < 0.05$) than that from passive diffusion alone (no brushing): Sonicare FlexCare increased diffusion by 129% over no brushing. Sonicare FlexCare resulted in a significantly greater ($p < 0.05$) mass transfer coefficient than the Oral-B Triumph by 29%.

Conclusion

This study demonstrated that the fluid dynamic action of Sonicare FlexCare enhances the penetration of fluoride through biofilm which may, in turn, help increase the bioavailability of

fluoride in residual dental plaque.

Comparison of the interproximal plaque removal efficacy of two powered toothbrushes using in vitro oral biofilms

Objective

To compare, in vitro, the interproximal plaque removal beyond the bristles of two power toothbrushes

Methodology

A dental plaque model in which a multispecies biofilm was grown on hydroxyapatite discs was used to evaluate the ability of Sonicare Elite and Oral-B 3D to remove biofilm without bristle contact. The dental plaque model was located interproximally at a distance of approximately 2 mm from the bristles and exposed to the fluid dynamic activity generated by the brushes with the motors either activated or inactivated for 5 seconds.

Results

In the activated state, both brushes removed a significantly higher percentage of plaque biofilm compared to the inactive brushes. The percentage of plaque bacteria removed by Sonicare Elite (32.2%) beyond the bristles was significantly greater than that removed by Oral-B 3D (9.5%), ($p < 0.05$).

Conclusion

Sonicare Elite removed significantly more dental plaque biofilm 2–3 mm beyond the reach of the bristles than Oral-B 3D.

In vitro evaluation of interproximal biofilm removal with power toothbrushes

Objective

To compare the removal of interproximal biofilm beyond the reach of the bristles of the Sonicare FlexCare and a rotating-oscillating power toothbrush, using an in vitro model

Methodology

The ability of the Sonicare FlexCare and Oral-B Triumph to remove biofilm without direct bristle contact was evaluated using a dental plaque model of a multispecies oral biofilm grown on hydroxyapatite discs. In a typodont model, the discs with plaque biofilm were located on interproximal sites of molar teeth at a distance of 2-4 mm from the bristles, and exposed to the fluid dynamic activity generated by the activated brushes. An inactivated Sonicare FlexCare was used as a control. Plaque removal efficacy was determined by enumeration of the percentage of viable bacteria removed from the discs as a result of brushing.

Results

The active Sonicare FlexCare toothbrush removed a significantly higher percentage of biofilm bacteria when compared to both the inactive state ($p < 0.0001$) and the active Oral-B Triumph toothbrush ($p = 0.0001$). Moreover, with 73% plaque biofilm removal, the Sonicare FlexCare removed three times the amount of plaque biofilm when compared to the Oral-B Triumph, with 23% removal.

Conclusion

Sonicare FlexCare removed significantly more biofilm 2-4 mm beyond the reach of the bristles than the Oral-B Triumph.
